Reviewer B:  
-----

A. This paper is based on rigorous academic standards.

3

B. This paper is presented in a format which is accessible by practitioners. It focuses on justification, results and implementation; has readable style; technical material is in appendix.

3

C. The paper has clarity of presentation. It is well organised, clearly written.

3

D. The paper makes a significant contribution to the body of knowledge related to this Journal. It is highly significant, breaks new ground, and provides a foundation for future research.

4

E. The topic of this paper is relevant, timely, and of interest to the audience of this journal.

4

F. The rationale for the paper is well grounded. It is based on a known theory or on an interesting issue.

3

G. The research methodology for the study is appropriate and applied properly.

3

H. The content of this paper is technically accurate and sound.

3

I. The supporting evidence in this paper is strongly reliable and properly validated.

3

J. Discussion of the results is based on analysis of data; results are not overstated or overgeneralized

1

K. Implications and recommendations for management are relevant and useful.

2

L. The paper is easy to read and free from grammatical or spelling errors.

3

M. Does this paper need a professional editing assistance?

Yes

N. Does this paper contain graphics of which the resolution needs to be improved?

No

O. Does this paper cite any related work published in this journal?

No

P. Comments for the author: (Please present specific details using the following categories.)

\* MINOR WEAKNESSES AND SUGGESTIONS:

NO

\* MAJOR WEAKNESSES AND SUGGESTIONS:

This research is interesting with a clear phenomenon, but it is not in accordance with academic standards and JMI, so it needs to be revised in a major way. 1. abstract is appropriate and lets readers get the gist or essence of your paper or article quickly, to decide whether to read the full paper. Revisions that need to be made: 1. the way of writing citations is not correct, for example in the first sentence in the introduction "The coral reefs had reached 2.5 million hectares in Indonesia, based on researched by LIPI in 2018." . It should be "The coral reefs had reached 2.5 million hectares in Indonesia (LIPI, 2018) 2. It appears that the quantifier "many" does not fit with the uncountable noun life. Consider changing it such as using "much", on sentence "Ecologically, coral reefs are a habitat for

many marine life which are a source of biodiversity and protect the coast from abrasion.” 3. Please put citation for this statement: “The number of corals in Indonesia is 83 genera with a total species of 569, about 76% of the genera and 69% of the world's coral species. Of the total 1067 sites, there were 386 sites (36.18%) in bad condition category, 366 sites (34.3%) in moderate condition category, 245 sites (22.96%) in good condition category and 70 sites (6.56%) in very good condition category.” 4. “Various types of fish that are caught by fresh fishermen are traded at a lower price than the market price”. Do you mean: “fresh fish that are caught by fishermen?” 5. “Green turtles can grow to reach more than 1 meter in length, more than 200 kg in weight and live for more than 100 years, the number of eggs released from a green turtle can reach 200 eggs. Towards sunset on Saturday, we can also see the release of hatchlings from captivity. Not all turtle hatchlings that are released into the open seas will live, due to various things, one of which is being preyed upon by predators”. Is the data based on observations, interviews or secondary data, please provide information. 6. “The community also has side jobs as nira tappers, tour guides, and motorcycle taxis.”. What is Nira, please explain shortly. 7. “The community's concern for conserving coral reefs departs from ..... will always maintained”. The verb maintained after the modal verb will does not appear to be in the correct form. Consider changing the verb form into “be maintained” 8. “It may also lead to changes in the social and economic aspect of”. Please change aspect into aspects 9. “in improving the quantity and quality of coral reefs in facing these threats, especially in relation to..”. Please change it “In improving the quantity and quality of coral reefs in facing these threats, especially concerning .. (The phrase “in relation to” may be wordy)” 10. “Therefore, this study was conducted to analyze The role of community in the maintenance and preservation of coral reefs in Ujung Genteng, Sukabumi.” . It is better to change the narration: Therefore, the objective of this study is to analyze the role of community in the maintenance and preservation of coral reefs in Ujung Genteng, Sukabumi. 11. This study discusses community participation, the main literature should be about community participation. Then the sources used are very old, should be updated and shown the gap from one source to another. State of the art does not need to have a specific sub-section, because it should have become part of the literature review process and should be replaced with a research framework. 12. Research by LIPI conducted by Widayatun, In addition, research conducted by Trialfhianty, T.I., Suadi entitled “The role of the community in supporting coral reef restoration in Pemuteran, Bali, Indonesia. Citation writing needs to be improved and completed. No need to display the research title, just the author's last name and the year of publication. 13. In the method, the researcher has not explained who is the informant and what are the considerations. The technique of withdrawing informants also needs to be explained and is the validity test carried out? Please explain the form of the test 14. Researchers also need to improve writing, where one paragraph consists of a minimum of 2 sentences and how to cite more than two authors 15. This research is qualitative in nature, so it is necessary to include quotations from sources that are supported by other sources 16. Please be consistent in the use of letters according to the JMI format 17. In addition to the conclusion, also include relevant recommendations from both a practical and academic perspective 18. We recommend that the author also ask for the help of a professional English editor to improve his English grammar 19. Reference list need to be improved and completed. “Burke et al. (2002), Salm and Clark (1989) in Lubis (2009), Ranjabar, 2006: 115). (Horoepoetri, Arimbi and Santosa, 2003), Biddle and Thomas (1966), LIPI” are not exist on reference list
